

A company works with number of employees, all the works are dependents on the employees. Even if one of the employees resign the job immediately then assigned work will be not finished at the time, so delivery of the project to the clients will be delayed. Company planned to make solution for this, they want to know which employee may resign next. If they know previously, they can arrange alternative to avoid such problem. As an AI Engineer you must give Solution to this.

A) How will you achieve this in AI?

We can achieve AI solution for this problem statement by having the data of employee Age,Salary,Notice Period,Any Client Escalations, Skill Set,Medical condition,Last rating etc. With this data we need to build an algorithm to predict whether the chances of employee will leave the company or not.

B) Find out the 3 -Stage of Problem Identification

NLP - Semi Supervised Learning - Classification.

C) Name the project

NextExit

D) Create the dummy Dataset.

Emp_id	Age	Salary	Notice_Period	Skill_Set	
Any_Client_Escalations		Medical_Condition		Last rating	
201	35	50k	60 days	Ansible, Python	No
Yes		A			

202	25	70k	60 days	AI ,Python, ML	No
No		A			
203	30	45k	60 days	Data Science,	Yes
Yes		B		Python
